

Praveen Bachoti

SOFTWARE QUALITY ENGINEER

Germantown, MD | 2404218266 | bachotip@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

QA/QC strategist and automation engineer with 9+ years of experience spanning software test engineering design, CI/CD pipeline integration, build verification and deployment orchestration across enterprise government systems. Adept at software test scaling and maintenance, determining what tests to automate, prioritizing QA coverage using data-driven insights based on usage traffic and patterns. Proven history of leading quality procedures towards defect-free build releases, and eliminating end-user adoption risks. Brings strong skills in systems analysis, cross-functional collaboration, and stakeholder communication.

TECHNICAL PROFICIENCIES

- Testing Methodologies: Functional Testing, Regression Testing, System Testing, Integration Testing, Acceptance Testing, Manual Testing, API Testing, Performance Testing, Section 508 Accessibility
- Test Automation Frameworks: Playwright, TestComplete, Cucumber, Selenium
- CI/CD, DevOps & Infrastructure: Terraform, SonarQube, AWS, GitLab, GitHub Actions, Jenkins, DevSecOps
- Software Development Practices & Tools: Agile Software Development, Test Management Tools, Defect Tracking Tools
- Languages and Other Tools: C#, Python, JavaScript, SQL, RESTful Web APIs, MongoDB, Claude Code

EXPERIENCE

Test Automation and CI/CD Technical Upskilling (Self-Directed) January 2026 – Present

- Architecting towards a shift-left QA framework, designed for seamless CI/CD integration of tests, ensuring continuous quality checks early in the software development lifecycle.
- Building GitOps fundamentals using GitHub Actions, GitLab CI/CD pipelines and Terraform Infrastructure-as-Code to provision cloud test environments dynamically upon code push.
- Engineering test automation suites for Node, Angular, and React web applications, using TypeScript within Playwright, implementing Page Object Models (POM) for code reusability and maintainability.

ICF Reston, VA
Software Quality and Deployment Engineer November 2024 – August 2025

- Managed build quality of 4+ module enterprise BPM solution by mapping and organizing unit tests with comprehensive test data using platform-native tooling.
- Provided strategic scenario reproduction direction to QA team, prioritizing high-risk negative path data entries and navigation, pinpointing known legacy software vulnerabilities.
- Performed analysis of BPM-integrated testing platforms (FitNesse, Cucumber) to ensure maximum compatibility of test automation architecture with out-of-box platform features.
- Proactively verified optimal adherence of BPM platform-specific patterns during the solution design stages with development and QA teams, using comprehensive documentation, promoting shift-left QA practice.
- Administered privileged test user accounts using Secret Server PAM tool, maintaining secure credential management practices across multiple application environments.

AMERICAN SYSTEMS Tysons Corner, VA
Software Quality Engineer and Developer June 2024 – November 2024

- Established defect report formatting standards, with functional and technical reproduction steps to improve triage efficiency and developer handoff.
- Tested REST API endpoints using Swagger, verifying request/response behavior, data integrity, and error handling across integration points between front-end and MS SQL Server database.
- Built and tested QA-optimized front-end features in ASP.NET Core, validating input handling, boundary conditions, and UI rendering across multiple application pages.
- Validated database data storage with targeted test entries across application workflows, confirming accurate persistence and retrieval of submitted data.

IBM

Software Quality Engineering Lead

North Bethesda, MD
April 2019 – June 2024

- Automated tests using Python & JavaScript, reducing daily manual work from an average of 4 hours a day to minutes (cutting testing time by 95%), and achieving a 125% increase in defect discovery per sprint, freeing up over 80 hours per month for more strategic tasks.
- Stood up AWS EC2 instance with cloud infrastructure team, installing TestComplete and deploying automated test projects and batch execution scripts for post-deployment pipeline runs.
- Wrote YAML pipeline script in GitLab CI/CD, scheduling automated smoke test execution against production deployments to validate release integrity without impacting live data, drastically reducing post-release defects by 30%, representing repair cost savings of ~\$1,200/month.
- Designed a production issue tracking feature within the BPM app enabling ticket submission, that reduced resolution time by 50% and unresolved issues by over 95%, resolving a major production management pain point.
- Architected suite of automated end-to-end regression tests using TestComplete, smoke tests, cross-app integration tests, and functional sprint tests, mapping tests onto feature tickets across 4+ enterprise applications.
- Owned the strategy for designing and engineering automated tests for live production and emerging greenfield systems, prioritizing modules with the highest projected traffic from the most administrative staff users.
- Flagged specific application features to optimize for automatability via DOM mapping during the early development stages, proactively ensuring 100% coverage of functionality during testing cycles.
- Presented test strategy and live tooling demo of Python-based automated tests to organization, securing cross-functional buy-in from stakeholders and establishing automation as a strategic investment area.

Pyramid Systems

Software Quality Engineer and UI Designer

Merrifield, VA
May 2017 - March 2019

- Engineered automated tests for a .NET WPF desktop solution using C# in CodedUI to perform end-to-end and feature-specific verifications, ensuring pre-deployment build quality.
- Created 100+ unit tests across the .NET MVVM architecture, spanning user interfaces and services, using Specflow and FluentAssertions, increasing code coverage by 25%.
- Ensured 100% compliance with Section 508 standards and performed testing with auxiliary peripheral devices such as DSLR cameras, signature pads, and fingerprint scanners, using Microsoft Inspect.
- Wrote and verified functionality against 200+ test scripts for front-end and back-end feature tickets, optimizing for multi-path user action scenarios and supplying key data for tests.
- Packaged and verified software builds using Jenkins CI, ensuring deployment readiness across release cycles.

EDUCATION

Boston University

M.S. in Computer Information Systems
Concentration in Web Application Development

Graduation May 2023
GPA 3.91

University of Maryland Baltimore County

B.S. in Information Systems
Certification in Web Development

Graduation December 2016
GPA 3.51
