SOFTWARE ENGINEER

Germantown, MD | 240.421.8266 | bachotip@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Boston University

M.S. in Computer Information Systems

Concentration in Web Application Development

JavaScript, TypeScript, Angular, Vue.js, Node.js, MongoDB, Kotlin

Graduation May 2023

GPA 3.91

University of Maryland Baltimore County

B.S. in Information Systems

Certification in Web Development

Java, C++, SQL, HTML, CSS, AJAX, PHP

Graduation December 2016

GPA 3.51

EXPERIENCE

Independent Engineering Practice

Germantown, MD · September 2025 – Present

Software Engineer | C#, Java, React, Git

- Modernizing a business task management application using **TypeScript/JavaScript**, and digital portfolio using **React, Angular, HTML**, and **CSS**, leveraging **Claude AI** in daily development workflows to accelerate code refactoring.
- Building a **C# ASP.NET Core RESTful API** using EF Core + LINQ connected to MS **SQL**, implementing custom DI services and LINQ queries to handle paginated filtering.
- Engineering a **Spring Boot 3** service running on **Java 21** with Virtual Threads turned on, using Pattern Matching in the business logic layer to handle complex DTO transformations cleanly.
- Configuring **CI/CD** pipelines using **GitHub Actions** and **GitLab** YAML to orchestrate testing suites and ensuring code quality to automate testing frameworks and integrate with **AWS** cloud infrastructure.

ICF

Reston, VA · November 2024 – August 2025

Software Engineer | HTML, CSS, SQL, Java

- Engineered dynamic components for a 4+ module, **Java**-based BPM **PaaS** application supporting government end users, implementing data-binding layers and responsive dashboards for a workflow platform with a projected \$8M+ ROI.
- Built custom PDF rendering templates using **HTML** and **CSS** within a workflow orchestration engine, standardizing data formatting and improving document generation efficiency across the platform.
- Designed and optimized relational **MariaDB** database schemas, writing complex **SQL** scripts for data migration, schema evolution, and back-end data persistence.
- Refactored legacy front-end views to reduce page load latency and improve responsiveness, partnering with UX teams in an **Agile** environment to establish reusable UI/UX design systems.
- Owned **CI/CD** packaging and deployment of code changes across multiple **cloud** environments as part of a **DevOps** workflow, identifying and resolving environment-specific conflicts to keep releases on schedule.

IBM

Rockville, MD · March 2022 – June 2024

Software Engineer | C#, Java, HTML, CSS, SQL, AWS

- Modernized 5+ front-end views within the **Java**-based BPM PaaS using component-based architecture and routing, developed within an **Agile** sprint cycle, which eliminated usability-related support requests from an 800+ user base.
- Implemented an issue submission and tracking engine using object-oriented data models via **JPA/Hibernate**-style **ORM** patterns, that reduced resolution time by 50% and unresolved issues by over 95%, resolving a major production management pain point.
- Supported the enhancement of a **.NET** application, using **HTML, CSS, JQuery**, and **Bootstrap** for front-end Razor views and **C#** for the underlying data input and event handling logic, cross-functionally in an **Agile** environment.
- Set up a nightly batch integration procedure to transfer production data from a **Java**-based PaaS system to a **.NET** system using **AWS S3** buckets as intermediate **cloud** storage, seamlessly integrating the two systems into a common workflow.

- Redeveloped an end-to-end **.NET** application into a cloud-hosted **Java**-based PaaS, analyzing **MVC** architecture and **MS SQL** Server relational database structure, deploying changes through a **DevOps CI/CD** pipeline.

Software Test Automation Engineer | Python, JS, GitLab

Rockville, MD · April 2019 – February 2022

- Automated tests using **Python** and **JavaScript**, reducing daily manual work from an average of 4 hours a day to minutes, and achieving a 125% increase in defect discovery per sprint, freeing up over 80 hours per month.
- Integrated automated pre-merge tests into a **DevOps CI/CD** pipeline with **GitLab**, by housing batch test automation scripts on an **AWS** EC2 instance, and writing a YAML pipeline script to execute them against production deployments.
- Architected suite of automated end-to-end regression tests using TestComplete, smoke tests, cross-app integration tests, and functional tests within **Agile** sprints, mapping tests onto feature tickets across 4+ enterprise applications.
- Tested **RESTful API** endpoints using Swagger, verifying request/response behavior, data integrity, and error handling across integration points between front-end and **MS SQL** Server database.
- Flagged features to optimize for **Python** and **JavaScript** automatability via DOM mapping during early development, ensuring 100% coverage during testing cycles.

Pyramid Systems

Fairfax, VA · May 2017 – March 2019

Front-end Engineer and UI Designer | C#, XAML, Jenkins

- Engineered UI features using **C#** and XAML for a **.NET** WPF desktop solution following the Model-View-ViewModel (**MVVM**) pattern in an **Agile** team, integrating peripheral devices.
- Created 100+ **C#** unit tests across the architecture, spanning user interfaces and services, using Specflow and FluentAssertions, increasing code coverage by 25%.
- Packaged and verified software builds using **Jenkins** for **CI/CD**, ensuring deployment readiness across release cycles.
- Designed and presented high-fidelity **.NET** XAML prototypes ahead of **Agile** sprints, increasing stakeholder buy-in and supporting technical-business alignment.

CERTIFICATIONS

Amazon Web Services

AWS Certified Cloud Practitioner

August 2020 – August 2023
